Projeto “APP”

Rio de janeiro 2023

Projeto APP

Trabalho consistia em uma aplicação, cujo seu objetivo era explicitar as técnicas abordadas durante as aulas da disciplina de programação de dispositivos móveis ministrada pelo professor Dr.Eng.Carlos Augusto Sicsú Ayres do Nascimento.

INTRODUÇÃO

"O espantoso crescimento de nossas tecnologias, a adaptabilidade e precisão que elas alcançaram, as idéias e hábitos que elas estão criando, trazem a certeza de que profundas mudanças são iminentes"

*Paul Válerý, piéces sur
L'art, 1931 Le
Conquete de
l'ubiquite*

O projeto “APP” é um protótipo que mescla os projetos desenvolvidos durante as aulas, projetos tais que abordam as técnicas de programação trabalhadas e explicadas pelo professor Dr.Sicsú.

Nessas aulas foram implementadas calculadoras que executam cálculos básicos, sendo eles, soma, subtração, divisão, multiplicação, radiciação, exponenciação e imc , que demostram a complexidade de um desenvolvimento estruturado usando a arquitetura mvc.

Neste documento, será apresentado prints de tela que correspondem a interface do aplicativo onde foi inteiramente desenvolvida sem a utilização de frameworks. Com o código sendo compilado inicialmente usando o sdk Android 4.1 (jelly Bean) e depois compilado também no Android 11 (R) possibilitando então sua execução em qualquer dispositivo Android.

Código da Tela Principal

```
